

TPLinux

Migration and innovation
from a single source

- Comprehensive functionality, a wide range of possible applications and modern integration mechanisms as well as experience of more than 50,000 installations worldwide make TPLinux one of the most flexible, globally available Linux store solutions around – whether for modernizing your store IT or for migrating established PoS hardware platforms.

Security for your store IT

TP Enterprise Applications

TPAdmin
Central control for efficient retail

TPAnalyze
Discover your potential

TPLoyalty
Increase customer loyalty

Ideal for migration – open scalable platform

TPLinux is hardware neutral and optimally scaleable and therefore ideal for migrating from an MS-DOS-based environment to a modern 32-bit environment. Because Linux provides an homogeneous platform for PoS and backstore systems, this store solution requires no further adaptation even if you need to extend your hardware configuration, for example for introducing touch screens.

Secure your IT investments

This store solution remains fully compatible even with future hardware and software products. After all, we have designed and developed TPLinux consistently on the basis of standard technologies. With benefits such as openness, modularity and ongoing enhanced development, TPLinux can help to reduce your total cost of ownership. With this strategic product, Wincor Nixdorf guarantees a lasting partnership with you and absolute continuity in terms of development. Last but not least: As a standard software solution, TPLinux is much more attractive and forward-looking than an individual solution.

Ideally equipped for international expansion

TPLinux meets the requirements of the most varied organizational structures thanks to many years' experience with international Linux software solutions from more than 50,000 installations around the globe. Whether EFT or fiscal

regulations, this software can be adapted with ease in line with country-specific or legal requirements. This drastically reduces both your costs for procuring the system and for maintenance and support.

Maximum scalability for any retail format

TPLinux is at home in any environment: Whether as a client/server configuration with two dedicated servers and up to 240 PoS clients, or in standalone mode as a so-called master PoS system, which in turn can support up to five dedicated PoS clients. Stores can be administered remotely, since store server and central functions are available over the web. This means that store-specific figures and evaluations can be accessed in equal measure in the store and at all organizational levels of the retail company. TPLinux therefore provides the perfect services: For small retail businesses as well as for organizations with small stores or for large and even very large store organizations.

HIGHLIGHTS

Compelling basics

- End-to-end Linux-based front-store solution
- Predestined for PoS hardware migration
- Web-based store server component
- International availability

Extensive functionality

- Checkout functionality extending across market segments
- Comprehensive back office and cash office administration
- Intelligent promotion engine for flexible campaigns and promotions

Scalability and flexibility

- Master PoS and client / server configuration (up to 240 PoS terminals)
- Line display (2 / 4 lines) or GUI (touch screen optional)
- Support of 3rd party hardware, e.g. PC-based PoS systems, IBM 4694, Unisys BabyPos

Highly integratable

- Use of technology and industry standards
- Web technologies and relational data storage
- Data export in XML, HTML, PDF, Excel format
